Constanta / Bucharest

[GitHub Page](#)

SKILLS

• Languages:

Python, Java, C#, JavaScript,
PL/SQL

• Technologies:

Django, ASP.NET MVC, REST API
Docker, AWS, Google Colab,
Godot, AutoCAD, Three.js,
PostgreSQL, React

LANGUAGES

- Romanian (Native)
- English (Fluent)
- French (Basic)

HOBBIES

Gaming, Cars, Music, Fashion,
Cooking, Football

EDUCATION

Master's Degree - ongoing

2025 - ongoing

University Of Bucharest
Software Engineering

Bachelor's Degree

2022 - 2025

Ovidius University of Constanta
Computer Science
Grade: 8.87

Bacalaureat Diploma

2018 - 2022

Decebal Highschool of Constanta
Grade: 8.50

PROJECTS

ReVive - Intelligent Restoration of Old Images/Videos

Personal Bachelor's Thesis Project

- Full-stack web application for restoring and colorizing old images and videos using deep learning. Implemented multiple AI models granting the access of colorization and filter application in a single application.
- The app allows users to upload photos or videos and choose the colorization method, apply filters and preview the results in real time and including them in the user's history.
- Technologies Used: Python, Django, AWS, Docker, React, Postman
- *Status: Finished*

Internal Web/Mobile App for Construction Orders (WIP)

Internal Construction Company Project (Navis Max)

- Built both the backend and the web frontend for an internal system that captures and registers orders across multiple construction sites.
- Designed the data model (sites, orders, deliveries) and a REST API;
- Added authentication and role-based access (e.g., site managers, drivers) and driver GPS integration with map providers (Google Maps, Waze) for an easier and faster delivery
- Tehnologies: Django, React, Kotlin, REST API, PostgreSQL, Git, Docker
- *Status: Soon to be deployed*

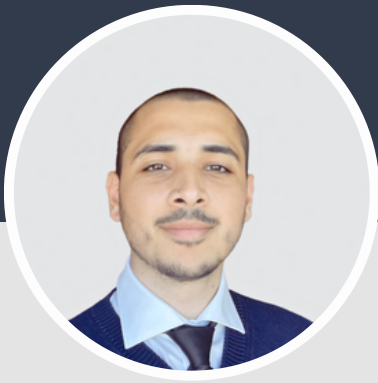

FitTrack - Personal Fitness Tracker

Team Web Development Project

- Web app to manage workouts, track goals and monitor your progress. Includes user authentication, workout logging and progress charts
- Technologies used: React (Vite), JavaScript, ChakraUI, TailwindCSS, Django, REST API, PostgreSQL
- *Developed in a team - contributed to backend, frontend design and business logic*

EXTRACURRICULAR

NEXXT Hackathon (Finalist Team)

November 2025

Organized by Raiffeisen Bank Romania

- Built FinAI, an AI-powered banking robo-advisor that analyzes user spending, savings and risk tolerance to generate personalized investment recommendations. Developed an interactive React + TypeScript frontend and a FastAPI + PostgreSQL backend with ML-based risk scoring and an intelligent agent workflow. Delivered a full prototype in under 48 hours as part of a multidisciplinary team.

SmartHack Hackathon (Participant)

November 2025

Organized by ASMI

- Developed VoiceLearn+, an AI-powered learning platform with student and teacher modules. Built speech-to-text pronunciation exercises using a custom-tuned STT model (balanced to detect mistakes without auto-correcting), TTS feedback for correct pronunciation, and dictation tasks. Designed a teacher dashboard showing student progress, frequent errors, and automated exercise recommendations. Integrated an end-of-lesson mini-game to improve engagement. Delivered the full prototype in 24 hours.

Future Forward Hackathon (4th Place)

November 2025

Organized by UiPath

- Built SkyPath, an AI-driven multi-agent travel assistant that generates optimized flight routes, hotel recommendations, and personalized itineraries using real Amadeus data. Implemented a Django backend with orchestrated AI agents for flight, hotel, and itinerary analysis, and a React frontend for an intuitive user experience. Delivered the full prototype in 24 hours.
